

Round Table Discussion

Masking of open label studies

EFSPI 10th Statistical Leaders Meeting
July 4, 2019

Background

Not all studies are blinded (especially in Oncology) and in the days of digitalisation (post days of paper CRF) access to patient information gets easier and easier allowing several people in principle to run their own analyses on the fly with very few effort. Careful considerations around the benefit and potential harms of such data access for ongoing clinical trial are needed.

40' Discussion

- **Is this an important topic for yourself and why?**
- **What do we need to do to solve/implement it?**

Masking of open label studies

Summary for 5–7 mins. plenary feedback

➤ Is this an important topic for yourself and why?
